recently received the following question:
Mike - have you posted a blog about the
difference between recip and scroll
compressors? We run into some
resistance in some areas because we
don't use all scrolls.

Copeland - Hermetic, Scroll

A scroll compressor uses two interleaved scrolls to pump, compress, or pressurize fluids such as liquids and gases. The vane geometry may be involute, archimedean spiral, or hybrid curves. Often, one of the scrolls is fixed, while the other orbits eccentrically without rotating, thereby trapping and pumping

Open and serviceable semi-hermetic reciprocating compressors can be disassembled for service in the field while welded hermetic is unserviceable. The welded hermetic type can be designed to a small cooling capacity (e.g. 1/2 ton or 1.8kW) while the open type can be designed to a large cooling capacity (e.g. a hundred of tons or
