Supersaturated
Solution**

Read Free Definition Of Supersaturated Solution

A supersaturated solution is a solution that contains more than the average solvent that can be dissolved at a given temperature. The recrystallization of the excess dissolved solvent in a supersaturated solution can be started by inserting a tiny solute crystal, called a seed crystal.

A supersaturated solution is one that is forced to hold more atoms in water or another solute than it normally would. Design and create your world with stem. It can be caused by reduction of the emulsion globules linear size that contains ammonium nitrate supersaturated solution $N [H.\text{sub}.4]N [O.\text{sub}.3]$.

**Solution - definition
of supersaturated ...**

Supersaturation is a solution that contains more of the dissolved material than could be dissolved by the solvent under normal circumstances. It can also refer to a vapor of a compound that has a higher (partial) pressure than the vapor pressure of that compound.

Supersaturation is used

In this case, a supersaturated solution of sodium acetate is poured over a crystal of sodium acetate. These crystals provide the lattice structure "seed" which causes the sodium acetate ions in solution to crystallize out. The salt begins to crystallize, forming a large sodium acetate structure from the precipitation of the

dissolved solute than in
a saturated solution.

The solute can easily fall out of solution by crystallization or precipitation. Special conditions may be needed to supersaturate a solution. It helps to heat a solution to increase solubility so more solute can be added.
