Modern authentication brings Active Directory Authentication Library (ADAL)-based sign in to Office 2013 and Office 2016 Windows clients. Office client applications sign in to the Office 365 service to gain access to Exchange Online email, SharePoint Online, Skype for Business Online (formerly Lync Online), and to activate the Office client license.

Modern Authentication Overview - MS Azure Team

This article applies to both Microsoft 365 Enterprise and Office 365 Enterprise. Modern Authentication is a method of identity management that offers more secure user authentication and authorization. It's available for Office 365 hybrid deployments of Skype for Business server on-premises and Exchange server on-premises, as well as, split-domain Skype for Business hybrids.

Hybrid Modern Authentication overview and prerequisites ...

Azure Active Directory (Azure AD) Pass-through Authentication allows your users to sign in to both on-premises and cloud-based applications using the same passwords. This feature provides your users a better experience - one less password to remember, and reduces IT helpdesk costs because your users are less likely to forget how to sign in.

Azure AD Connect: Pass-through Authentication | Microsoft Docs

There's another possibility for Windows-hosted applications on computers joined either to a Windows domain or by Azure Active Directory (Azure AD). These applications can silently acquire a token by using Integrated Windows Authentication. Applications running on a device without a browser can still call an API on behalf of a user.

Microsoft identity platform authentication flows & app ...

SAML authentication is commonly used with identity providers such as Active Directory Federation Services (ADFS) federated to Azure AD and is therefore frequently used in enterprise applications. OpenID Connect is commonly used for apps that are purely in the cloud, such as mobile apps, web sites, and web APIs.

Authentication vs authorization - Microsoft Identity ...

Log on to your Azure AD tenant in the Azure portal, open the Azure AD resource and head to the App Registrations to register a new app Once you register you app, you need to configure the Authentication settings. In effect, we need to tell what kind of app we want to authenticate and provide a Redirect URI for our tokens.

Modern authentication with Azure AD for WinForms (native) apps

Vittorio Bertocci is principal program manager on the Azure Active Directory team, where he works on the developer experience: Active Directory Authentication Library (ADAL), OpenID Connect and OAuth2 OWIN components in ASP.NET, Azure AD integration in various Visual Studio work streams, and other things he can't tell you about (yet). Vittorio joined the product team after years as a virtual ...

Amazon.com: Modern Authentication with Azure Active ...

By enabling Modern Authentication (ADAL) for Office client applications, the Office application uses an in-application browser control to render the Azure AD sign-in experience in the same fashion as browser-based Office 365 clients like Outlook on the Web. ADAL-based OAuth authentication works for federated as well as non-federated scenarios.

Modern Authentication - Part 1 - Peters & Associates

Modern Authentication with Azure Active Directory for Web Applications. Active Directory has been transformed to reflect the cloud revolution, modern protocols, and today's newest SaaS paradigms. This is an authoritative, deep-dive guide to building Active Directory authentication solutions for these new environments.

Modern Authentication with Azure Active Directory for Web ...

In a normal AD authentication, all the systems/users in a network are a part of the directory and they can access the secured system with their AD credentials. However, Azure handles it with an Active Directory.

Azure Active Directory Authentication - C# Corner

To give your users easy access to your cloud apps, Azure Active Directory (Azure AD) supports a broad variety of authentication protocols including legacy authentication. However, legacy protocols don't support multi-factor authentication (MFA). MFA is in many environments a common requirement to address identity theft.

A. Azure AD PowerShell has support for modern authentication in public preview as described on the Active Directory Team Blog. SharePoint Online Management Shell has support for modern authentication available from here.

Updated Office 365 modern authentication - Microsoft 365 Blog

Buy Modern Authentication with Azure Active Directory for Web Applications (Developer Reference) Professional by Bertocci, Vittorio (ISBN: 9780735696945) from Amazon's Book Store. Everyday low prices and free delivery on eligible orders.

Modern Authentication with Azure Active Directory for Web ...

Switching to Modern Authentication (even if it's used just for username and password) is more secure than using Basic Auth. Modern Authentication is not subject to credential capture and re-use, credentials are not stored on the client device, it ensures users re-authenticate when something about their connection or state changes, and it makes adding MFA simple.
