Sensation and perception work together in a fluid, continuous process. Our judgments in detection tasks are influenced by both the absolute threshold of the signal as well as our current motivations and experiences. Signal detection analysis is used to differentiate sensitivity from response biases.

3.2 Sensation and Perception. The Sanskrit term most commonly associated with sensory activity, indriya ('sensation' or 'power'), is found in the Rg Veda (I, 55; II, 16), a collection of hymns dealing with various religio-philosophical topics central to the Brahmanical tradition. Here the senses are likened to lesser deities acting on ...
